

ROLS CARPETS PRESENTS TERRA

When plastic bottles turn into design rugs

For almost 100 years, at Rols Carpets we have been creating exceptional **quality made-to-measure carpets** from our factory in Crevillent.

At Rols we have always used wool as our main raw material. Wool is a naturally sustainable fibre that is also totally renewable. But in recent years we have also introduced collections made with recycled plastic. In this process, we are upcycling waste, giving a creative reuse and a second life to PET bottles and abandoned nylon fishing nets collected from the ocean.

TERRA is our newest collection of indoor and outdoor rugs made from 100% recycled PET. For each square metre of Terra, we take **300-400 discarded single use plastic bottles**, repurposing them to create a natural style post use PET fibre. Is styled to replicate the look and texture of sisal and jute floorcoverings, offering the end user superior durability and ease of maintenance. Terra is available in 6 stocked designs in a 2.00m width.
